Epistemic Bias Pilot Investigation Tables

Triage vs rating, by model and condition

Separate triage and rating runs, 15 runs per table. Selected = Pursue count from the triage runs. Average rating, could have and fair share come from the separate rating runs. Could have = in the top three of the ratings, including ties. Fair share = top-three slots with ties split evenly. % = selected / could have and selected / fair share; n/a where the denominator is 0.

Identification check: plain-language accounts

One run per model. Each model saw the eight plain-language accounts and was asked to name the tradition or thinker each came from, with a confidence level. Correct = the named source matches the account's source.

Fable 5.1

Account	Named as	Correct	Confidence
Predictive processing	Anil Seth (interoceptive predictive processing, with Metzinger-style transparency)	Yes	Medium
Minimal self	Dan Zahavi / Husserlian phenomenology (minimal self, retention–protention)	Yes	High
Narrative self	Daniel Dennett (self as narrative center of gravity)	Yes	High
Theravāda	Early Buddhism / Pali Canon (five aggregates, Khemaka Sutta's residual "I am")	Yes	High
Yogācāra	Yogācāra Buddhism (ālaya-vijñāna and kliṣṭa-manas)	Yes	High
Advaita	Advaita Vedanta (Shankara)	Yes	High
Interpreter (control)	Michael Gazzaniga (left-hemisphere "interpreter")	Yes	High
Recurrent thought (control)	Sam Harris (Waking Up) – possibly Ramana Maharshi's "I-thought"	Yes	Medium

GPT-6 Astra

Account	Named as	Correct	Confidence
Predictive processing	Predictive-processing accounts of embodied selfhood (Anil Seth), combined with Thomas Metzinger's transparent self-model	Yes	Medium
Minimal self	Phenomenology of prereflective self-awareness and temporal consciousness: Husserl, developed by Dan Zahavi	Yes	High
Narrative self	Daniel Dennett's narrative self / "center of narrative gravity"	Yes	High
Theravāda	Early Buddhist analysis of the five aggregates, appropriation, and the conceit "I am"	Yes	High
Yogācāra	Yogācāra Buddhism: storehouse consciousness (ālayavijñāna) and afflicted mind (kliṣṭamanas)	Yes	High
Advaita	Advaita Vedānta: witness-consciousness, ahaṃkāra, and superimposition	Yes	High
Interpreter (control)	Michael Gazzaniga's left-hemisphere interpreter theory, overstated here as the self's exclusive source	Yes	Medium
Recurrent thought (control)	Cannot confidently identify; resembles an "I-thought" account, but is not securely attributable to a particular tradition or thinker	Not identified	Low

Gemma 4 31B

Account	Named as	Correct	Confidence
Predictive processing	Anil Seth	Yes	High
Minimal self	Phenomenology (Husserl)	Yes	High
Narrative self	Daniel Dennett	Yes	High
Theravāda	Buddhism (Five Aggregates)	Yes	High
Yogācāra	Abhidhamma	No	High
Advaita	Advaita Vedanta	Yes	High
Interpreter (control)	Michael Gazzaniga	Yes	High
Recurrent thought (control)	Vipassana	Partial	Medium

Combined runs: rating and selection in one call

Fable 5.1 and GPT-6 Astra only (Gemma had no combined runs). Each call asked for both a 1–7 rating of every account and the Pursue/Park/Drop triage. Unlike the separate runs, selections and ratings here come from the same call, so could have and fair share are computed from the ratings given alongside each selection. Columns as in the triage tables.

Testability runs, by model

Mean rating (1–7). Three-question rows: separate run, 15 calls per description; their empty-account values come from a later run (2026-10-15) with the same three questions, 15 calls per empty account. Ladder rows: 15 calls per description per rung.

Fable 5.1

Step	Question	Empty predictive	Empty Yogācāra	Predictive	Yogācāra	Gap (pred − Yog)
1. Original	How testable is this account?	1.00	1.00	4.00	2.67	1.33
2. In principle	In principle: observations that could count against it?	1.00	1.00	4.67	3.07	1.60
3. Operationalizable	Could key terms be operationally defined?	1.93	1.13	4.93	3.20	1.73
